Midpoint continued

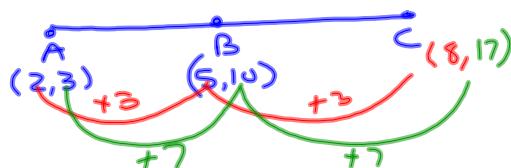

- ① Find midpoint of
 $(\underline{2}, \underline{5})$ and $(\underline{8}, \underline{7})$.

$$\left(\frac{\underline{2} + \underline{8}}{2}, \frac{\underline{5} + \underline{7}}{2} \right)$$
$$(5, 6)$$

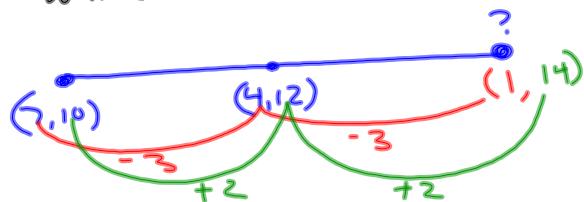

- ② Find the midpoint of
 $(1, 7)$ and $(3, -7)$

$$\left(\frac{\underline{1} + \underline{3}}{2}, \frac{\underline{7} + \underline{-7}}{2} \right)$$
$$(2, 0)$$

- ③ \overline{AC} has a midpoint at B.
A is at $(2, 3)$ and B is at $(5, 10)$.
Where is C?

- ④ One endpoint is at $(7, 10)$ and
the midpoint is at $(4, 12)$.
Where is the other endpoint?

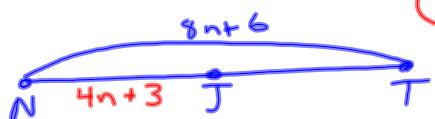

- ⑤ \overline{AC} has B as a midpoint.
If $AB = 4n - 6$, what is BC ?

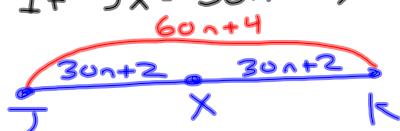

$$4n-6$$

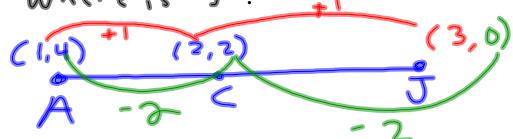

- ⑥ \overline{NT} has a midpoint at J .
If $NT = 8n + 6$, what is NJ ? 4nt3

- ⑦ \overline{JK} has midpoint at X .
If $JX = 30n + 2$, what is JK ?

- ⑧ If C is midpoint of \overline{AJ}
with $A = (1, 4)$ and $C = (2, 2)$,
Where is J ?

- ⑨ B is midpoint of \overline{AN} . If
 $BN = 6n - 2$, what is AN ?
